

1Q 2026 financial results

Craig Marshall
SVP investor relations

Hello everyone, and thanks for your interest in bp's first quarter 2026 results.

Today's video features Meg O'Neill, chief executive officer, and Kate Thomson, chief financial officer.

Before I hand over to Meg, I would like to draw your attention to our cautionary statement.

Cautionary statement

In order to utilise the 'safe harbor' provisions of the United States Private Securities Litigation Reform Act of 1995 (the 'PSLRA') and the general doctrine of cautionary statements, bp is providing the following cautionary statement: The discussion in this presentation contains certain forecasts, projections and forward-looking statements – that is, statements related to future, not past events and circumstances – with respect to the financial condition, results of operations and businesses of bp and certain of the plans and objectives of bp with respect to these items. These statements may generally, but not always, be identified by the use of words such as 'will', 'expects', 'is expected to', 'aims', 'should', 'may', 'objective', 'is likely to', 'intends', 'believes', 'anticipates', 'plans', 'we see', 'focus on' or similar expressions.

In particular, the following, among other statements, are all forward-looking in nature: plans, expectations and assumptions regarding oil and gas demand, supply, prices, volumes, production, refinery turnaround activity and margins; plans and expectations regarding bp's portfolio; plans and expectations regarding the amount, effects, timing, and nature of certain divestments and related payments and proceeds, including expectations regarding the Castrol business and Gelsenkirchen refinery; plans and expectations regarding bp's current and future projects; plans and expectations regarding bp's primary targets, including structural cost reduction, net debt, ROACE and adjusted free cash flow targets; plans and expectations regarding upstream production; plans and expectations regarding bp's customers business, including volumes and fuels margins; plans and expectations regarding bp's products business, including refining throughput (including throughput at Whiting), turnaround activity and refining margins; plans and expectations regarding bp's financial frame, balance sheet, financial performance, cash flows, timing of payments, cost performance, cash breakeven, cost reduction, hybrid capital (including with respect to the redemption, without replacement, of hybrid bonds), capital expenditure and capital allocation, net debt, results of operations, future dividends, share buybacks and the use of excess cash; plans and expectations regarding management of leases, hybrids and finance debt, including the effects on finance costs, plans and expectations regarding bp's working capital build and its unwinding; plans and expectations regarding the impact of heightened volatility in market prices and other factors (including the WTI-Brent differential) on realised prices and margin; plans and expectations regarding Gulf of America settlement payments; plans and expectations regarding bp's company structure; plans and expectations regarding bp's 2Q26 and full year 2026 guidance, including upstream production, customers, products, other business and corporate, DD&A, underlying effective tax rate, capital expenditures, divestments and other proceeds; and plans and expectations regarding bp's focus on operations, balance sheet, portfolio simplification, cost base, cash flow and returns.

By their nature, forward-looking statements involve risk and uncertainty because they relate to events and depend on circumstances that will or may occur in the future and are outside the control of bp. Recent global developments have caused significant uncertainty and volatility in macroeconomic conditions and commodity markets. Each item of outlook and guidance set out in this presentation is based on bp's current expectations but actual outcomes and results may be impacted by these evolving macroeconomic and market conditions.

Actual results or outcomes may differ materially from those expressed in such statements, depending on a variety of factors, including: the extent and duration of the impact of current market conditions including the volatility of oil prices, the effects of bp's plan to exit its shareholding in Rosneft and other investments in Russia, overall global economic and business conditions impacting bp's business and demand for bp's products as well as the specific factors identified in the discussions accompanying such forward-looking statements; changes in consumer preferences and societal expectations; the pace of development and adoption of alternative energy solutions; developments in policy, law, regulation, technology and markets, including societal and investor sentiment related to the issue of climate change; the receipt of relevant third party and/or regulatory approvals including ongoing approvals required for the continued developments of approved projects; the timing and level of maintenance and/or turnaround activity; the timing and volume of refinery additions and outages; the timing of bringing new fields onstream; the timing, quantum and nature of certain acquisitions and divestments; future levels of industry product supply, demand and pricing, including supply growth in North America and continued base oil and additive supply shortages; OPEC+ quota restrictions; PSA and TSC effects; operational and safety problems; potential lapses in product quality; economic and financial market conditions generally or in various countries and regions; political stability and economic growth in relevant areas of the world; changes in laws and governmental regulations and policies, including related to climate change; changes in social attitudes and customer preferences; regulatory or legal actions including the types of enforcement action pursued and the nature of remedies sought or imposed; the actions of prosecutors, regulatory authorities and courts; delays in the processes for resolving claims; amounts ultimately payable and timing of payments relating to the Gulf of America oil spill; the conditions and developments in the Middle East; exchange rate fluctuations; development and use of new technology; recruitment and retention of a skilled workforce; the success or otherwise of partnering; the actions of competitors, trading partners, contractors, subcontractors, creditors, rating agencies and others; bp's access to future credit resources; business disruption and crisis management; the impact on bp's reputation of ethical misconduct and non-compliance with regulatory obligations; trading losses; major uninsured losses; the possibility that international sanctions or other steps taken by governmental authorities or any other relevant persons may impact bp's ability to sell its interests in Rosneft, or the price for which bp could sell such interests; the actions of contractors; natural disasters and adverse weather conditions; changes in public expectations and other changes to business conditions; wars and acts of terrorism; cyber-attacks or sabotage; and those factors discussed under "Risk factors" in bp's Annual Report and Form 20-F for fiscal year 2025 as filed with the US Securities and Exchange Commission.

Reconciliations to IFRS - This presentation also contains financial information which is not presented in accordance with International Financial Reporting Standards (IFRS). A quantitative reconciliation of this information to the most directly comparable financial measure calculated and presented in accordance with IFRS can be found on our website at www.bp.com.

Tables and projections in this presentation are bp projections unless otherwise stated.

April 2026

1Q 2026 financial results 3

In this video, we will make forward-looking statements that refer to our estimates, plans and expectations. Actual results and outcomes could differ materially due to factors we note on this slide and in our UK and SEC filings. Please refer to our Annual Report, Stock Exchange announcement and SEC filings for more details. These documents are available on our website.

With that, over to you, Meg.

Meg O'Neill
Chief executive officer

Thanks Craig.

It's an honour and privilege to be here today as bp's CEO.

I have a deep respect for bp; its history, global reach and long-standing partnerships.

This is a company with real scale, optionality and significant opportunity. It has a strong portfolio of assets and a depth of capability across the organisation.

As for me, I've been in the energy business for 30 years. I love what I do and I'm passionate about our work.

Our industry underpins economic growth, human development and so much of everyday life. We play a vital role in supplying customers across the world with the energy they need to help them thrive.

Right now, we're operating in an environment of significant complexity: geopolitical tension, supply disruption, rapid technological change and shifting global energy demand.

Energy has rarely been more central to the world's concerns.

The teams across bp are playing their part to keep oil, gas and refined products flowing during an incredibly challenging time – focused on maintaining safe, reliable and cost-efficient operations.

I'm encouraged by what I've already seen across the business: strong technical expertise, a deep commitment to safety, and a clear understanding of the need to deliver operational excellence and competitive returns through the cycle. Execution and consistency will be critical in realising our potential.

I see a real opportunity at bp to build on the strong progress made in 2025, and to do so in a focused and disciplined way. I'll come back to that in my closing remarks and give you some thoughts as we look ahead.

I would also like to offer my personal thanks to Carol for her leadership and ensuring continued momentum in recent months.

But first, let me hand over to Kate to talk through the first quarter results.

Kate Thomson
Chief financial officer

Thank you Meg, and let me say on behalf of the whole bp team a very warm welcome to you. I am very much looking forward to working together with you in the months and years to come.

Let me start with some comments on the situation in the Middle East, where the safety and wellbeing of our people in the region continues to be our main priority.

Our business response teams are supporting our personnel in the region and helping to manage any disruptions to the business, and we will continue to monitor developments very closely.

Price environment

Reflecting on the price environment, events in the Middle East, and the ensuing impacts on key global supply routes, drove heightened volatility across crude oil, natural gas and refined products in the last part the quarter.

Crude oil prices increased sharply in March, with average Brent prices up almost 50% versus February. International gas prices also rose sharply, including in Europe and Asia, with March average UK NBP and JKM up around 65% and 70%, respectively versus February. In the US - other than a price spike during winter storm Fern - Henry Hub prices were much more stable, averaging \$3.50 per MMBTU in the quarter. Our refining indicator margin moved significantly higher towards the end of the quarter.

These events serve to demonstrate why our integrated model matters. When conditions tighten, and flows shift quickly, our ability to act as one system across the value chain helps us to respond promptly to enable energy to flow to our customers. I'll come back to talk through the operational and financial implications of these events shortly.

1Q 2026 highlights

4Q 2025 **\$6.7bn**

Net debt*

\$25.3bn

4Q 2025 **\$22.2bn**

1Q 2026 financial results 7

Turning then to performance in the first quarter where we have delivered strong operational and financial results.

Reported upstream production was resilient at 2.3 million barrels of oil equivalent per day. This was supported by continued high plant reliability, higher production in the Gulf of America, and strong performance in bpx, offsetting disruptions in the Middle East and some divestment impacts.

For the fifth consecutive quarter, refining availability was above our target of 96%. Refining throughput was over 1.5 million barrels per day, our highest quarterly figure in four years. We also made progress in simplifying our portfolio with the agreed sale of the Gelsenkirchen refinery announced in March. Once complete, this will further increase our structural cost reduction target to \$6.5 to 7.5 billion by 2027.

This all supported our delivery of \$3.2 billion of underlying net income, significantly higher than the fourth quarter, and \$8.9 billion of operating cash flow before a working capital build of \$6 billion.

And today, we are announcing a dividend per ordinary share of 8.32 cents.

1Q 2026 financial results 8

Looking at the income statement in detail:

Group underlying earnings increased quarter-on-quarter primarily driven by stronger performance in customers and products.

Turning to the segments in more detail:

- In gas and low carbon energy, the underlying result of \$1.3 billion compared to \$1.4 billion in the fourth quarter. This reflects broadly flat realisations and an average gas marketing and trading result contribution. When compared to our published rules of thumb, we saw an adverse impact of around \$200 million from price lags.
- In oil production and operations, the underlying result of \$2.0 billion is flat compared to the fourth quarter. This reflects the divestment of Culzean in the North Sea offset by higher realisations. When compared to our published rule of thumb, there is an adverse impact of around \$700 million from price lags.
- Looking ahead, realisation of the price lags experienced in the first quarter will be subject to future volume and prices.
- Turning to customers and products, the underlying result was around \$1.9 billion higher than the previous quarter. At the business level:
 - In customers, the underlying result of \$1 billion, compared to \$900 million in the fourth quarter. This reflects seasonally lower volumes

and lower retail fuels margins. These were more than offset by;

- a higher midstream performance, with our integrated value chain enabling greater flexibility in sourcing and routing volumes to capture value;
 - one-off timing effects; and
 - a lower underlying operating expenditure.
- In products, the underlying result of \$2.2 billion compared to \$500 million in the fourth quarter. The improvement in earnings reflect higher realised refining margins, higher throughput, and crude selection timing effects. The oil trading contribution was exceptional.

As always, trading results will vary quarter-to-quarter, and our focus remains on capturing value through the cycle while operating within a clearly defined risk framework.

Taking all these factors together, group underlying replacement cost profit before interest and tax was \$6.3 billion compared to \$4.4 billion in the previous quarter.

Below the operating segments:

- underlying finance costs were around \$1 billion.
- the underlying effective tax rate in the first quarter was 32%, compared to 43% for the previous quarter, reflecting changes in the geographical mix of profits, and
- non-controlling interest was around \$370 million – this was higher than the fourth quarter reflecting the business results where we do not own 100%.

Group underlying replacement cost profit was \$3.2 billion, and we recorded around \$2.5 billion of adverse adjusting items across the segments, including post-tax net impairments of around \$400 million. After inventory holding gains of \$3.2 billion, we reported first quarter IFRS profit of \$3.8 billion.

1Q 2026 cash flow and balance sheet

	\$bn		
	1Q 2026	4Q 2025	1Q 2025
Operating cash flow	2.9	7.6	2.8
Working capital (build)/release ⁽¹⁾	(6.0)	0.9	(3.4)
Capital expenditure	(3.3)	(4.2)	(3.6)
Divestment and other proceeds	0.2	3.6	0.3
Net debt ⁽²⁾	25.3	22.2	27.0
Financial obligations and instruments ⁽²⁾	60.5	57.8	63.5

(1) Adjusted for inventory holding gains or losses*, fair value accounting effects* and other adjusting items.
 (2) Total of net debt, hybrid bonds and securities, leases and Gulf of America settlement liabilities.

1Q 2026 financial results 9

Moving to cash flow and the balance sheet:

Operating cash flow was \$2.9 billion, compared to \$7.6 billion in the fourth quarter, after a working capital build of \$6.0 billion. Excluding the impact of working capital movements, our adjusted operating cash flow was \$8.9 billion compared to \$6.7 billion in the previous quarter, reflecting improved cash conversion quarter-on-quarter.

Given the significant working capital build this quarter, let me comment on the key moving parts:

- \$4.1 billion reflected seasonal working capital effects, for example inventory builds across our downstream businesses ahead of the anticipated seasonal increase in demand, and higher levels of inventory in transit. It also includes a significant build as a result of the rising price environment. We expect around half of this \$4.1 billion to unwind over the remainder of the year, with the majority over the next two quarters. The unwind of the other half will depend on how the Middle East situation evolves.
- \$1.1 billion related to the timing of payments – these are expected to reverse over the normal course of business through the year; and
- \$800 million of other items, primarily related to the Gulf of America settlement payments, which do not reverse.

1Q 2026 net debt movement

(1) Completed on 6th Feb 2026. (2) Includes offsetting any dilution from employee share schemes over time.

1Q 2026 financial results 10

With a number of big moving parts, let me share a few words on how our sources and uses of cash have flowed through to net debt this quarter.

- Operating cash flow was \$2.9 billion.
- Capex in the quarter was \$3.3 billion. Full year capex guidance remains in the range of \$13 to 13.5 billion.
- Shareholder distributions in the quarter were \$1.8 billion, including around \$500 million for completing the share buyback programme announced in November 2025. As a reminder, and as announced in February, share buybacks have been suspended.
- And we made \$1 billion of payments related to lease liabilities and hybrid bonds.

Taken together, our net debt increased by around \$3 billion to end the quarter at \$25.3 billion.

Looking ahead, we have confidence in the plan and our path to reduce net debt through:

- continued strong operational performance across our businesses driving cash flow growth;
- proceeds from our divestment programme, including around \$6 billion from the announced Castrol transaction;

- the unwind of working capital; and
- the allocation of all excess cash to the balance sheet.

In addition, we have announced today, subject to market conditions, our plan to reduce our hybrid corporate bond financing by around \$4.3 billion by the end of 2027. This is from today's balance of \$13.3 billion, made up of a core stack of around \$12 billion and another \$1.3 billion issued as prefinancing. Following completion of these actions, the remaining \$9 billion of corporate hybrid bonds is intended to remain a permanent component of bp's capital structure.

Including the planned redemption of hybrid bonds, we expect net debt and financial obligations and instruments to reduce in the second half of 2026 – and we are confident on delivery of our 2027 net debt target.

Middle East implications

2025 upstream production (bp share, net of royalties)

	Crude oil (mbd)	Natural gas (mmcf)	Total hydrocarbons (mboed)
Subsidiaries			
Abu Dhabi	208	–	208
Oman	22	590	124
Equity-accounted entities			
Iraq	79	–	79
Total	309	590	411

Source: bp Annual Report and Form 20-F 2025 / FY25 Group Databook

Marker vs realised prices

Source: Platts

Forward considerations

- Impact determined by the extent and duration of current market conditions
- Upstream – differences between rules of thumb and realised prices due to price lags, price caps, timing of liftings and contract structures
- Refining – margin dislocations driven by crude differentials, product yields and freight costs

(1) Data to 24 April 2026.

1Q 2026 financial results 11

Before moving to guidance, let me come back to the situation in the Middle East and how to think about implications to bp's earnings:

Starting with operations:

- On average, we have exported around 100 thousand barrels per day of our Middle East liftings via the Strait of Hormuz, including the barrels from Iraq and a portion of Abu Dhabi onshore. The balance of our Abu Dhabi production entitlement has typically been lifted from the Fujairah terminal.
- For LNG, around 5-10% of our portfolio has been sourced from the Middle East region.
- Our supply, trading & shipping team are working with our customers to manage the impacts of the current supply disruptions.
- In refining, although we have no direct exposure to operations in the Middle East, we are focused on running our North American and European assets safely. Across our fuels businesses, we are working to meet customer demand.

From a value perspective:

- In the upstream, the heightened volatility is leading to notable differences between marker prices used in our rules of thumb and realised prices due to price lags, price caps, timing of liftings and contract structures.

- An example is sales in the Gulf of America, which are priced on a one-month lag. March prices will be captured in second quarter results. There will also be other factors in the second quarter affecting realisations, including the WTI-Brent differential.
- In refining, we are seeing margin dislocations driven by three main factors: crude differentials, product yields and freight costs. Assuming current conditions persist, we could expect the difference between our refining indicator margin and our realised margin to be greater than \$5 per barrel but this is subject to how the situation unfolds.

We will continue to monitor developments across commodity markets, work with our partners and assess implications for our businesses and plan. And as usual, we will provide an update on our realisations and production through our quarterly trading statement.

2Q 2026 outlook and guidance

	1Q 2026 reported	2Q 2026 guidance ⁽¹⁾
Reported upstream production	2,339 mboed	– Lower due to seasonal maintenance predominantly in the Gulf of America and the effects of disruption in the Middle East – Heightened volatility in the oil and gas prices could also impact PSA contracts
Customers	\$1.0bn (underlying RCPBIT)	– Seasonally higher volumes more than offset by a lower midstream result including the potential reversal of the 1Q timing effects – Volumes and fuels margins to remain sensitive to conditions and developments in the Middle East
Products		
Refinery throughput	1,527 mbd	– Higher level of planned refinery turnaround activity vs 1Q26 – Lower throughput at Whiting due to a third-party event, which has now been resolved
Refining margins	\$16.9/bbl (RIM)	Remain sensitive to the cost of supply and conditions in the Middle East
Hybrid capital	\$16.0bn	Plans to reduce its hybrid capital in 2Q26 through the redemption, without replacement, of €2.5bn perpetual hybrid bonds

⁽¹⁾ Refer to the 1Q 2026 stock exchange announcement and bp.com for full text.

1Q 2026 financial results 12

Looking ahead to the second quarter, and compared to the first quarter:

- We expect reported upstream production to be lower, due to seasonal maintenance predominantly in the Gulf of America and the effects of disruption in the Middle East. The heightened volatility in the oil and gas prices could also impact PSA contracts.
- In customers, we expect seasonally higher volumes to be more than offset by a lower midstream result including the potential reversal of the 1Q timing effects. We also expect volumes and fuels margins to remain sensitive to conditions and developments in the Middle East.
- In products, refining throughput is expected to be impacted by a higher level of planned turnaround. We also expect lower throughput at Whiting due to a third-party event this month which has now been resolved. Refining margins are expected to remain sensitive to the cost of supply and conditions in the Middle East.
- We now expect to reduce our hybrid capital through the redemption, without replacement, of the €2.5billion perpetual hybrid.

FY 2026 outlook and guidance

	FY 2025 reported	FY 2026 guidance ⁽¹⁾
Reported upstream production	2,312 mboed	Lower due to effects of disruptions in the Middle East
Group		Underlying production* broadly flat
OP&O		Underlying production broadly flat
G&LCE		Underlying production lower
Customers	\$3.8bn (underlying RCPBIT)	– Cash flow growth supported by SCR*, partly offset by earnings impact of completed and announced divestments – Lower depreciation due to Castrol AHFS accounting treatment – Fuel margins remain sensitive to movements in the cost of supply
Products		
Refinery throughput	1,440 mbd	Significantly lower level of turnaround activity
Refining margins	\$12.8/bbl (RIM)	Remain sensitive to the cost of supply and conditions in the Middle East
OB&C	\$0.6bn (underlying RCPBIT)	~\$1.0bn, charges vary quarter to quarter
DD&A	\$17.8bn	Broadly flat
Underlying ETR*	42%	~40%
Capex	\$14.5bn	\$13-13.5bn, evenly weighted through the year
Divestment and other proceeds	\$5.3bn	\$9-10bn, incl. ~\$6bn from announced Castrol transaction, all significantly weighted to 2H26
Gulf of America settlement payments	\$1.2bn pre-tax	\$1.6bn pre-tax, incl. \$0.4bn in 1Q26 and \$1.1bn in 2Q26

(1) Refer to the 1Q 2026 stock exchange announcement and bp.com for full text.

1Q 2026 financial results 13

Looking to full year 2026, we now expect full year reported upstream production to be lower due to effects of the Middle East disruption. All other full year guidance remains unchanged and we remain resolute on the importance of maintaining capital discipline.

And importantly, as outlined at our full year results in February, excess cash will be fully allocated to accelerate the strengthening of our balance sheet.

In summary, and as I reflect on another strong quarter, we are building momentum, delivering on our financial plan, all in support of our strategy.

Our assets continue to run well, underpinning strong earnings and cash flow delivery. We are continuing to high-grade our portfolio and are taking action to reduce our cost base – which we will update on further at our second quarter results. We remain on track to deliver on our key targets by the end of 2027.

With that, I'll hand back to Meg for some closing remarks, Meg.

Meg O'Neill
Chief executive officer

Thanks Kate.

This has been another strong quarter for bp despite a lot of external volatility. Our operations continue to perform well, we have kept momentum going in our financial performance and are headed in the right direction.

My immediate priority is to accelerate our progress, keeping a tight focus on safety, operational performance and capital discipline.

We need to continue to strengthen the balance sheet and remain disciplined in our spending and our investment – and in doing so, build a more resilient bp.

We must also capitalise on the tremendous opportunity that exists across our portfolio to unlock growth and drive improved returns. This includes our world-class upstream assets in some of the best basins in the world. We have a high-quality pipeline of major projects that we are developing today, and others that represent untapped potential for the future. This will require discipline to enable us to invest in the highest returning assets that will create durable cash flows, increasing returns and driving long-term value.

We have a critical role to maximise returns for our shareholders, and to work safely and responsibly with communities and with the partners and customers. I look forward to continuing to meet many of our shareholders and external stakeholders over the coming weeks and months.

I will also be out across the business: meeting our operational leaders and

front-line teams, understanding our assets, and reinforcing our strategic priorities at every level of the organisation.

I have announced the intention to organise bp with a defined Upstream and Downstream. This change will enable us to reset ways of working and ensure that accountability sits in the right place and simplifies decision making, empowering the bp team. We will keep you updated as we make progress on this.

From the front-line to the leadership, I want us to be rigorous in our decision-making, clear and consistent in how we communicate, and always learning – always pushing ourselves to be better.

That's how we simplify bp and deliver safely and reliably – maximise returns, compete to win and realise bp's full potential.

bp is a great company, built on the strength of remarkable people and world-class assets.

Our next chapter will be as a simpler, stronger, and more valuable company – and I'm really excited about the opportunity ahead of us.

Thank you.

Appendix

Financial summary

Unit production costs (\$/boe)	6.39	5.82	6.34
bp-operated plant reliability (%)	95.7	95.4	95.4

Underlying RCPBIT \$bn

1Q 2026 vs 4Q 2025

- Divestment in the North Sea offset by higher realisations including the impact of the price lags
- When compared to our published RoT, there is an adverse impact of around \$700m from price lags

(1) Because of rounding, upstream production may not agree exactly with the sum of GLCE and OPO.

Customers and products

	1Q 2026	4Q 2025	1Q 2025
Customers – convenience & mobility (\$bn)			
Customers – convenience & mobility adjusted EBITDA*	1.5	1.5	1.2
Castrol adjusted EBITDA ¹	0.3	0.3	0.3
Capital expenditure	0.4	1.1	0.6
Marketing sales of refined products (mbd)	3,030	3,170	3,054
Products – refining & trading (\$bn)			
Adjusted EBITDA	2.6	0.9	0.4
Capital expenditure	0.3	0.4	0.4
Refining environment			
RIM (\$/bbl)	16.9	15.2	8.1
Refinery throughputs (mbd)	1,527	1,460	1,496
Refining availability (%)	96.3	96.0	96.2

(1) Castrol is included in customers – convenience & mobility.

Underlying RCPBIT \$bn

1Q 2026 vs 4Q 2025

Customers

- Seasonally lower volumes and lower retail fuels margins, more than offset by a stronger midstream performance including stronger supply optimisation across our integrated value chain and one-off timing effects, and a lower UOE

Products

- Refining – higher realised refining margins, a higher throughput driven by lower turnaround activity and the recovery following reduced capacity at the Whiting refinery in 4Q 2025, and crude selection timing effects
- Trading – oil trading contribution was exceptional

Glossary – abbreviations

AHFS	Assets held for sale.
Barrel (bbl)	159 litres, 42 US gallons.
boe	Barrels of oil equivalent.
C&P	Customers and products.
DD&A	Depreciation, depletion and amortisation.
EAE	Equity accounted entity.
EBITDA	Earnings before interest, tax, depreciation and amortisation.
FVAEs	Fair value accounting effects.
G&LCE	Gas and low carbon energy.
GoA	Gulf of America.
HH	Henry Hub.
LCE	Low carbon energy.
mbd	Thousand barrels per day.
mboed	Thousand barrels of oil equivalent per day.
mmboed	Million barrels of oil equivalent per day.

mmbtu	Million British thermal units.
mmcfd	Million cubic feet per day.
NBP	National balancing point.
NCI	Non-controlling interest.
OB&C	Other businesses and corporate.
OP&O	Oil production and operations.
RC	Replacement cost.
RCP	Replacement cost profit
RCPBIT	Replacement cost profit or loss before interest and tax.
RoT	Rules of thumb.
RIM	Refining indicator margin.
SCR	Structural cost reduction.
SVP	Senior vice president.
UAE	United Arab Emirates.
UPII	Unincorporated partnership and incidental interests.
UOE	Underlying operating expenditure.

Glossary

Adjusted EBITDA Non-IFRS measure presented for bp's operating segments and is defined as RC profit before interest and tax, adjusting for net adjusting items* before interest and tax, and adding back DD&A and exploration write-offs (net of adjusting items). Adjusted EBITDA by business is a further analysis of adjusted EBITDA for the C&P businesses. bp believes it is helpful to disclose adjusted EBITDA by operating segment and by business because it reflects how the segments measure underlying business delivery. The nearest equivalent measure on an IFRS basis for the segment is RC profit or loss before interest and tax, which is bp's measure of profit or loss that is required to be disclosed for each operating segment under IFRS.

Adjusted operating cash flow Non-IFRS measure. It is defined as net cash provided by (used in) operating activities as presented in the condensed group cash flow statement, excluding movements in inventories and other current and non-current assets and liabilities as presented in the condensed group cash flow statement, adjusted for inventory holding gains/losses*, FVAEs relating to subsidiaries and other adjusting items relating to the non-cash movement of US emissions obligations carried as a provision that will be settled by allowances held as inventory. When used in the context of a segment or subset of businesses rather than the group, the terms refer to the segment or business' estimated share thereof.

Adjusting items Items that bp discloses separately because it considers such disclosures to be meaningful and relevant to investors. They are items that management considers to be important to period-on-period analysis of the group's results and are disclosed in order to enable investors to better understand and evaluate the group's reported financial performance. Adjusting items include gains and losses on the sale of businesses and fixed assets, impairments, environmental and related provisions and charges, restructuring, integration and rationalisation costs, FVAEs and costs relating to the GoA oil spill and other items. Adjusting items within EAEs are reported net of incremental income tax reported by the equity accounted entity. Adjusting items are used as a reconciling adjustment to derive underlying RC profit or loss and related underlying measures which are non-IFRS measures.

Capital expenditure (capex) Total cash capital expenditure as stated in the condensed group cash flow statement. Capital expenditure for the operating segments, G&LCE businesses and C&P businesses is presented on the same basis.

Consolidation adjustment – UPII Unrealised profit in inventory arising on inter-segment transactions.

Fair value accounting effects (FVAEs) Non-IFRS adjustments to our IFRS profit (loss). They reflect the difference between the way bp manages the economic exposure and internally measures performance of certain activities and the way those activities are measured under IFRS. FVAEs are included within adjusting items. They relate to certain of the group's commodity, interest rate and currency risk exposures as detailed below. Other than as noted below, the FVAEs described are reported in both the G&LCE and C&P segments. Refer to the stock exchange announcement and bp .com for full text.

Gas & low carbon energy Segment comprises our gas and low carbon businesses. Our gas business includes regions with upstream activities that predominantly produce natural gas, gas trading and our Archaea Energy business. Our low carbon business includes solar, offshore wind, hydrogen and CCS, and power trading, and until December 2025 also included onshore wind. Power trading and marketing includes trading of both renewable and non-renewable power.

Hydrocarbons Liquids and natural gas. Natural gas is converted to oil equivalent at 5.8 billion cubic feet = 1 million barrels.

Inventory holding gains and losses Non-IFRS adjustments to our IFRS profit (loss). Refer to the stock exchange announcement and bp.com for full text.

Liquids Liquids comprises crude oil, condensate and natural gas liquids. For the OP&O segment, it also includes bitumen.

Glossary

Major projects	Have a bp net investment of at least \$250 million or are considered to be of strategic importance to bp or of a high degree of complexity.
Net debt	Non-IFRS measure. Calculated as finance debt, as shown in the balance sheet, plus the fair value of associated derivative financial instruments that are used to hedge foreign currency exchange and interest rate risks relating to finance debt, for which hedge accounting is applied, less cash and cash equivalents. Net debt does not include accrued interest, which is reported within other receivables and other payables on the balance sheet and for which the associated cash flows are presented as operating cash flows in the group cash flow statement.
Operating cash flow	Net cash provided by (used in) operating activities as stated in the condensed group cash flow statement.
Production-sharing agreement/contract (PSA/PSC)	Is an arrangement through which an oil and gas company bears the risks and costs of exploration, development and production. In return, if exploration is successful, the oil company receives entitlement to variable physical volumes of hydrocarbons, representing recovery of the costs incurred and a stipulated share of the production remaining after such cost recovery.
Realisations	Result of dividing revenue generated from hydrocarbon sales, excluding revenue generated from purchases made for resale and royalty volumes, by revenue generating hydrocarbon production volumes. Revenue generating hydrocarbon production reflects the bp share of production as adjusted for any production which does not generate revenue. Adjustments may include losses due to shrinkage, amounts consumed during processing, and contractual or regulatory host committed volumes such as royalties. For the G&LCE and OP&O segments, realisations include transfers between businesses.

Refining availability	Represents Solomon Associates' operational availability for bp-operated refineries, which is defined as the percentage of the year that a unit is available for processing after subtracting the annualised time lost due to turnaround activity and all mechanical, process and regulatory downtime.
Refining indicator margin (RIM)	A simple indicator of the weighted average of bp's crude slate and product yield as deemed representative for each refinery. Actual margins realised by bp may vary due to a variety of factors, including the actual mix of a crude and product for a given quarter.
RC profit or loss / RC profit or loss attributable to bp shareholders	Reflects the replacement cost of inventories sold in the period and is calculated as profit or loss attributable to bp shareholders, adjusting for inventory holding gains and losses (net of tax). RC profit or loss for the group is not a recognised IFRS measure. bp believes this measure is useful to illustrate to investors the fact that crude oil and product prices can vary significantly from period to period and that the impact on our reported result under IFRS can be significant. Inventory holding gains and losses vary from period to period due to changes in prices as well as changes in underlying inventory levels. In order for investors to understand the operating performance of the group excluding the impact of price changes on the replacement of inventories, and to make comparisons of operating performance between reporting periods, bp's management believes it is helpful to disclose this measure. The nearest equivalent measure on an IFRS basis is profit or loss attributable to bp shareholders.

Glossary

Structural cost reduction

Calculated as decreases in UOE* as a result of operational efficiencies, divestments, workforce reductions and other cost saving measures that are expected to be sustainable compared with 2023 levels. The total change between periods in UOE will reflect both SCRs and other changes in spend, including market factors, such as inflation and foreign exchange impacts, as well as changes in activity levels and costs associated with new operations. Estimates of cumulative annual SCR may be revised depending on whether cost reductions realised in prior periods are determined to be sustainable compared with 2023 levels. SCRs are stewarded internally to support management's oversight of spending over time. bp believes this performance measure is useful in demonstrating how management drives cost discipline across the entire organisation, simplifying our processes and portfolio and streamlining the way we work. The nearest IFRS measures are production and manufacturing expenses and distributions and administration expenses.

Technical service contract (TSC)

Is an arrangement through which an oil and gas company bears the risks and costs of exploration, development and production. In return, the oil and gas company receives entitlement to variable physical volumes of hydrocarbons, representing recovery of the costs incurred and a profit margin which reflects incremental production added to the oilfield.

Underlying effective tax rate (ETR)

Non-IFRS measure and calculated by dividing taxation on an underlying RC basis by underlying RC profit or loss before tax. Taxation on an underlying RC basis for the group is calculated as taxation as stated on the group income statement adjusted for taxation on inventory holding gains and losses and total taxation on adjusting items*. Information on underlying RC profit or loss is provided below. Taxation on an underlying RC basis presented for the operating segments is calculated through an allocation of taxation on an underlying RC basis to each segment.

Underlying operating expenditure (UOE)

Is a non-IFRS measure and a subset of production and manufacturing expenses plus distribution and administration expenses and excludes costs that are classified as adjusting items. It represents the majority of the remaining expenses in these line items but excludes certain costs that are variable, primarily with volumes (such as freight costs). Other variable costs are included in purchases in the income statement. Management believes that underlying operating expenditure is a performance measure that provides investors with useful information regarding the company's financial performance because it considers these expenses to be the principal operating and overhead expenses that are most directly under their control although they also include certain foreign exchange and commodity price effects. The nearest IFRS measures are production and manufacturing expenses and distribution and administration expenses.

Underlying production

2026 underlying production, when compared with 2025, is production after adjusting for acquisitions and divestments, curtailments, and entitlement impacts in our production-sharing agreements/contracts and TSC.

Underlying RC profit or loss / underlying RC profit or loss attributable to bp shareholders

Non-IFRS measure and is RC profit or loss* after excluding net adjusting items and related taxation.

Glossary

Underlying RC profit or loss before interest and tax

For the operating segments or C&P businesses is calculated as RC profit or loss* including profit or loss attributable to NCI before interest and tax for the operating segments and excluding net adjusting items for the respective operating segment or business. bp believes that underlying RC profit or loss is a useful measure for investors because it is a measure closely tracked by management to evaluate bp's operating performance and to make financial, strategic and operating decisions and because it may help investors to understand and evaluate, in the same manner as management, the underlying trends in bp's operational performance on a comparable basis, period on period, by adjusting for the effects of these adjusting items. The nearest equivalent measure on an IFRS basis for the group is profit or loss attributable to bp shareholders. The nearest equivalent measure on an IFRS basis for segments and businesses is RC profit or loss before interest and taxation.

Underlying RC profit or loss per share / underlying RC profit or loss per ADS

Non-IFRS measure. Underlying RC profit or loss per ordinary share is calculated using the same denominator as earnings per share as defined in the consolidated financial statements. The numerator used is underlying RC profit or loss attributable to bp shareholders, rather than profit or loss attributable to bp ordinary shareholders. Underlying RC profit or loss per ADS is calculated as outlined above for underlying RC profit or loss per share except the denominator is adjusted to reflect one ADS equivalent to six ordinary shares. bp believes it is helpful to disclose the underlying RC profit or loss per ordinary share and per ADS because these measures may help investors to understand and evaluate, in the same manner as management, the underlying trends in bp's operational performance on a comparable basis, period on period. The nearest equivalent measure on an IFRS basis is basic earnings per share based on profit or loss for the period attributable to bp ordinary shareholders.

Unit production costs

Calculated as production cost divided by units of production. Production cost does not include ad valorem and severance taxes. Units of production are barrels for liquids and thousands of cubic feet for gas. Amounts disclosed are for bp subsidiaries only and do not include bp's share of EAE.

Upstream

Includes oil and natural gas field development and production within the G&LCE and OP&O segments. References to upstream exclude Rosneft.

Upstream plant reliability

(bp-operated) is calculated taking 100% less the ratio of total unplanned plant deferrals divided by installed production capacity, excluding non-operated assets and bpx energy. Unplanned plant deferrals are associated with the topside plant and where applicable the subsea equipment (excluding wells and reservoir). Unplanned plant deferrals include breakdowns, which does not include GoA weather related downtime.

Working capital

Movements in inventories and other current and non-current assets and liabilities as reported in the condensed group cash flow statement. Change in working capital adjusted for inventory holding gains/losses*, fair value accounting effects relating to subsidiaries and other adjusting items is a non-IFRS measure. It is calculated by adjusting for inventory holding gains/losses* reported in the period; FVAEs relating to subsidiaries reported within adjusting items for the period; and other adjusting items relating to the non-cash movement of US emissions obligations carried as a provision that will be settled by allowances held as inventory. This represents what would have been reported as movements in inventories and other current and non-current assets and liabilities, if the starting point in determining net cash provided by operating activities had been underlying replacement cost profit rather than profit for the period. The nearest equivalent measure on an IFRS basis for this is movements in inventories and other current and non-current assets and liabilities. bp utilises various arrangements in order to manage its working capital including discounting of receivables and, in the supply and trading business, the active management of supplier payment terms, inventory and collateral.
