

Shell plc

Fourth quarter 2025 results

Consistent delivery with more to come

February 5, 2026

Definitions & cautionary note

The companies in which Shell plc directly and indirectly owns investments are separate legal entities. In this presentation “Shell”, “Shell Group” and “Group” are sometimes used for convenience to reference Shell plc and its subsidiaries in general. Likewise, the words “we”, “us” and “our” are also used to refer to Shell plc and its subsidiaries in general or to those who work for them. These terms are also used where no useful purpose is served by identifying the particular entity or entities. “Subsidiaries”, “Shell subsidiaries” and “Shell companies” as used in this presentation refer to entities over which Shell plc either directly or indirectly has control. The terms “joint venture”, “joint operations”, “joint arrangements”, and “associates” may also be used to refer to a commercial arrangement in which Shell has a direct or indirect ownership interest with one or more parties. The term “Shell interest” is used for convenience to indicate the direct and/or indirect ownership interest held by Shell in an entity or unincorporated joint arrangement, after exclusion of all third-party interest.

This presentation contains forward-looking statements (within the meaning of the U.S. Private Securities Litigation Reform Act of 1995) concerning the financial condition, results of operations and businesses of Shell. All statements other than statements of historical fact are, or may be deemed to be, forward-looking statements. Forward-looking statements are statements of future expectations that are based on management’s current expectations and assumptions and involve known and unknown risks and uncertainties that could cause actual results, performance or events to differ materially from those expressed or implied in these statements. Forward-looking statements include, among other things, statements concerning the potential exposure of Shell to market risks and statements expressing management’s expectations, beliefs, estimates, forecasts, projections and assumptions. These forward-looking statements are identified by their use of terms and phrases such as “aim”; “ambition”; “anticipate”; “aspire”; “aspiration”; “believe”; “commit”; “commitment”; “could”; “desire”; “estimate”; “expect”; “goals”; “intend”; “may”; “milestones”; “objectives”; “outlook”; “plan”; “probably”; “project”; “risks”; “schedule”; “seek”; “should”; “target”; “vision”; “will”; “would” and similar terms and phrases. There are a number of factors that could affect the future operations of Shell and could cause those results to differ materially from those expressed in the forward-looking statements included in this presentation, including (without limitation): (a) price fluctuations in crude oil and natural gas; (b) changes in demand for Shell’s products; (c) currency fluctuations; (d) drilling and production results; (e) reserves estimates; (f) loss of market share and industry competition; (g) environmental and physical risks, including climate change; (h) risks associated with the identification of suitable potential acquisition properties and targets, and successful negotiation and completion of such transactions; (i) the risk of doing business in developing countries and countries subject to international sanctions; (j) legislative, judicial, fiscal and regulatory developments including tariffs and regulatory measures addressing climate change; (k) economic and financial market conditions in various countries and regions; (l) political risks, including the risks of expropriation and renegotiation of the terms of contracts with governmental entities, delays or advancements in the approval of projects and delays in the reimbursement for shared costs; (m) risks associated with the impact of pandemics, regional conflicts, such as the Russia-Ukraine war and the conflict in the Middle East, and a significant cyber security, data privacy or IT incident; (n) the pace of the energy transition; and (o) changes in trading conditions. No assurance is provided that future dividend payments will match or exceed previous dividend payments. All forward-looking statements contained in this presentation are expressly qualified in their entirety by the cautionary statements contained or referred to in this section. Readers should not place undue reliance on forward-looking statements. Additional risk factors that may affect future results are contained in Shell plc’s Form 20-F and amendment thereto for the year ended December 31, 2024 (available at www.shell.com/investors/news-and-filings/sec-filings.html and www.sec.gov). These risk factors also expressly qualify all forward-looking statements contained in this presentation and should be considered by the reader. Each forward-looking statement speaks only as of the date of this presentation, February 5, 2026. Neither Shell plc nor any of its subsidiaries undertake any obligation to publicly update or revise any forward-looking statement as a result of new information, future events or other information. In light of these risks, results could differ materially from those stated, implied or inferred from the forward-looking statements contained in this presentation.

Also, in this presentation we may refer to Shell’s “net carbon intensity” (NCI), which includes Shell’s carbon emissions from the production of our energy products, our suppliers’ carbon emissions in supplying energy for that production and our customers’ carbon emissions associated with their use of the energy products we sell. Shell’s NCI also includes the emissions associated with the production and use of energy products produced by others which Shell purchases for resale. Shell only controls its own emissions. The use of the terms Shell’s “net carbon intensity” or NCI is for convenience only and not intended to suggest these emissions are those of Shell plc or its subsidiaries.

Shell’s operating plan and outlook are forecasted for a three-year period and ten-year period, respectively, and are updated every year. They reflect the current economic environment and what we can reasonably expect to see over the next three and ten years. Accordingly, the outlook reflects our Scope 1, Scope 2 and NCI targets over the next ten years. However, Shell’s operating plan and outlook cannot reflect our 2050 net-zero emissions target, as this target is outside our planning period. Such future operating plans and outlooks could include changes to our portfolio, efficiency improvements and the use of carbon capture and storage and carbon credits. In the future, as society moves towards net-zero emissions, we expect Shell’s operating plans and outlooks to reflect this movement. However, if society is not net zero in 2050, as of today, there would be significant risk that Shell may not meet this target.

This presentation may contain certain forward-looking non-GAAP measures such as capital expenditure and divestments. We are unable to provide a reconciliation of these forward-looking non-GAAP measures to the most comparable GAAP financial measures because certain information needed to reconcile those non-GAAP measures to the most comparable GAAP financial measures is dependent on future events some of which are outside the control of Shell, such as oil and gas prices, interest rates and exchange rates. Moreover, estimating such GAAP measures with the required precision necessary to provide a meaningful reconciliation is extremely difficult and could not be accomplished without unreasonable effort. Non-GAAP measures in respect of future periods which cannot be reconciled to the most comparable GAAP financial measure are calculated in a manner which is consistent with the accounting policies applied in Shell plc’s consolidated financial statements.

The contents of websites referred to in this presentation do not form part of this presentation.

We may have used certain terms, such as resources, in this presentation that the United States Securities and Exchange Commission (SEC) strictly prohibits us from including in our filings with the SEC. Investors are urged to consider closely the disclosure in our Form 20-F and any amendment thereto, File No 1-32575, available on the SEC website www.sec.gov

¹In 2025 Shell's remaining mining interest and associated synthetic crude oil reserves in the Canadian oil sands has been swapped for an additional 10% interest (20% in total) in the Scotford upgrader and Quest CCS project. Synthetic reserves at the end of 2024 amounted to 741 mmboe (of which 370 mmboe related to the non-controlling interest). 2024 Proved reserves including synthetic reserves were 9.6 billion boe. ²Including synthetic crude oil reserves and Acquisitions & Divestments (A&D). ³Excluding Reserves and Production related to Nigeria onshore and Oil sands. Given the impact of divestments completed in 2025, Shell views the RRR (excl. A&D) as the most relevant metric. See preliminary reserves update in the Q4 & FY 2025 unaudited results [here](#).

[G] Post recently announced dilution, which is subject to approval. Previously referred to as Gato do Mato.

[H] Shell quantities only.

Appendix

Definitions

Metric	Definition
ROACE	Return on average Capital Employed (ROACE) measures the efficiency of Shell’s utilisation of the capital it employs. It is calculated by expressing the sum of Adjusted Earnings plus non-controlling interest (excluding identified items) for the current and previous three quarters, adjusted for after-tax interest expense and after-tax interest income, as a percentage of the average Capital Employed excluding cash and cash equivalents for the same period. Capital Employed consists of total equity, current debt, and non-current debt, reduced by cash and cash equivalents. ROACE at a segment level is calculated as adjusted earnings over average Capital Employed.
Structural Cost Reductions	Structural cost reductions describe decreases in underlying operating expenses as a result of operational efficiencies, divestments, workforce reductions and other cost-saving measures that are expected to be sustainable compared with 2022 levels. The total change between periods in underlying operating expenses will reflect both structural cost reductions and other changes in spend, including market factors, such as inflation and foreign exchange impacts, as well as changes in activity levels and costs associated with new operations. Estimates of cumulative annual structural cost reduction may be revised depending on whether cost reductions realised in prior periods are determined to be sustainable compared to 2022 levels. Structural cost reductions are stewarded internally to support management’s oversight of spending over time. 2028 target reflects annualised saving achieved by end-2028.
Gearing	Gearing is net debt as a percentage of total capital (net debt plus total equity).
nFCF	Price-normalised Organic Free cash flow adjusted for Working capital movements, cash flow from derivatives.
nFCF per share	Price-normalised Organic Free cash flow adjusted for Working capital movements, cash flow from derivatives, divided by shares outstanding at the end of the period. The outstanding number of shares excludes shares held in trust.

Year	Assumptions
2024 – price adjusted	\$70/bbl Brent, \$4/MMBtu Henry Hub (and related gas markers), and historic average chemical and refining margins.
2028 / 2030 / 2035 projections	\$70/bbl Brent and \$4/MMBtu Henry Hub (both real 2024), indicative chemical margins of \$150 to \$250 per tonne (nominal) and indicative refining margins of \$6 to \$9 per barrel (nominal).

Accessibility descriptions

Shareholder distributions 40-50% of CFFO through the cycle

The chart displays shareholder distributions as a percentage of cash flow from operations (CFFO) for 2023, 2024, and 2025. The chart is colour-coded as follows: yellow bars for actuals and dotted grey lines for target ranges. The percentages shown at the top of each bar are 42% for 2023, 41% for 2024, and 52% for 2025. Target range for 2023 and 2024 is 30-40% and 40-50% for 2025, which are shown in dotted grey lines crossing bars are the specified intervals.

[Return to page 4](#)

Cash capex \$20-22 billion per year 2025-2028

The chart shows Shell's cash capital expenditure over time, measured in billions of US dollars. The bars are colour-coded as follows: yellow bars for actuals and dotted grey lines for targets. Cash capex was approximately \$24 billion in 2023 and \$21 billion in 2024. The target range for 2023-2024 is \$22-25 billion per year. From 2025 onward, cash capex range is \$20-22 billion per year for the period 2025 to 2028. The 2025 bar shown at approximately \$21 billion.

[Return to page 4](#)

Structural cost reduction of \$5-7 billion by end-2028

The chart displays cumulative structural cost reduction in billions of US dollars for 2023-2024, and 2023-25, with a long-term target for 2023-28. Bars are yellow for actuals and grey for targets. The values shown are \$3.1 billion for 2023-2024, and \$5.1 billion for 2023-25, with an overall target of \$5-7 billion for 2023-28.

[Return to page 4](#)

Price-normalised FCF growth/share¹ >10% p.a. through 2030

The chart displays price-normalised free cash flow (FCF) growth per share in dollars for 2024, 2025 and a target for 2030. Bars are yellow for actuals and grey for targets. Dotted grey line has been used to show expected growth over time. The values shown at the top of each bar are \$4.4/share for 2024, and \$4.6/share for 2025, with the dotted line indicating a goal of more than 10% annual growth through 2030.

[Return to page 4](#)

Key price markers and inputs – Oil

The chart shows quarterly historical oil price movements from the first quarter of 2024 to the fourth quarter of 2025, measured in US dollars per barrel. Brent crude is shown as a red line, and JCC-3 as a grey line. Both trend downward over the period shown in the graph. By Q4 2025, Brent is shown at approximately \$64 per barrel and JCC-3 at approximately \$72 per barrel. The table below the chart indicates a price of \$81 for Brent in 2024 and \$69 in 2025, and \$88 for JCC-3 in 2024 and \$76 in 2025, highlighting lower oil prices year on year.

[Return to page 5](#)

Key price markers and inputs – Gas

The chart presents quarterly gas price trends from the first quarter of 2024 to the fourth quarter of 2025, measured in US dollars per MMBtu. Henry Hub prices, shown in dark blue, remain relatively low in 2024 and gradually increase from around \$1.5 in Q1 2024 to approximately \$3.7 by the Q4 2025. EU TTF prices, shown in green, are rising through 2024, peaking around Q1'25, and then easing to approximately \$10.3 by Q4 2025. The summary table shows Henry Hub prices of \$2.2 in 2024 and \$3.5 in 2025, and EU TTF prices of \$10.9 in 2024 and \$11.9 in 2025.

Shell Indicative Refining Margin (IRM) and Indicative Chemical Margin (ICM)

The chart shows Shell's indicative refining margin (IRM) in dollars per barrel and indicative chemical margin (ICM) in dollars per tonne from the first quarter of 2024 to the fourth quarter of 2025. The IRM is shown in yellow and the ICM in black. IRM is falling during 2024 before recovering in Q1 2025 and peaking in Q4 2025, ending at approximately \$14 per barrel. The ICM remains stable before falling in Q1 2025 and then increasing again in Q2 2025, and ending at around \$140 per tonne. The table below the chart indicates average IRM of \$7.7 in 2024 and \$10.1 in 2025, and average ICM of \$152 in 2024 and \$148 in 2025.

[Return to page 5](#)

Adjusted Earnings Q3 2025 to Q4 2025

The waterfall chart shows adjusted earnings in billions of US dollars moving from Q3 2025 to Q4 2025. Reductions to the Q3 2025 figure are shown in red bars, and increases in green. Adjusted earnings are \$5.4 billion in Q3 2025. Integrated Gas reduces adjusted earnings by \$0.5 billion. Upstream reduces adjusted earnings by \$0.2 billion. Marketing reduces adjusted earnings by \$0.7 billion. Chemicals and Products reduces adjusted earnings by \$0.6 billion. Renewables and Energy Solutions has no impact. Corporate and non-controlling interest reduces adjusted earnings by \$0.1 billion. Adjusted earnings in Q4 2025 are \$3.3 billion.

[Return to page 8](#)

Cash conversion Q4 2025

The waterfall chart illustrates the conversion of Adjusted earnings to cash flow from operations in the fourth quarter of 2025, measured in billions of US dollars. Reductions to the adjusted earnings figure are shown in red bars, and increases in green. Adjusted Earnings of \$3.3 billion are increased by non-cash items, including depreciation, depletion and amortisation and write-offs of \$5.8 billion, interest of \$0.7 billion, and tax charges and non-controlling interest of \$3.0 billion, resulting in adjusted EBITDA of \$12.8 billion. The chart continues from Adjusted EBITDA and reflects inflows from JV movements of \$0.9 billion, outflows from derivatives movements of \$0.1 billion, and tax paid and other items reduce cash by \$5.5 billion. Working capital movements provide a \$1.3 billion inflow, made up of smaller flows from inventories (inflow of \$1 billion from price and outflow of \$0.2 billion from volume) and receivables, payables and other (inflow of \$0.5 billion). The chart concludes with cash flow from operations of \$9.4 billion for Q4 2025.

[Return to page 8](#)

Adjusted Earnings 2024 to 2025

The waterfall chart shows the change in Adjusted earnings from full year 2024 to full year 2025, measured in billions of US dollars. Reductions to the 2024 figure are shown in red bars, and increases in green. Adjusted earnings declines from \$23.7 billion in 2024 to \$18.5 billion in 2025. The largest negative driver is lower prices and margins, reducing adjusted earnings by \$7.2 billion. This is partly offset by positive contributions from marketing margins of \$0.4 billion, volume and mix of \$0.7 billion, operating expenses of \$0.7 billion, and tax impact of \$0.5 billion. Other items have a negative impact of \$0.2 billion.

Cash conversion full year 2025

The waterfall chart illustrates the conversion of Adjusted earnings to cash flow from operations (CFFO) for the full year 2025, measured in billions of US dollars. Reductions to the adjusted earnings figure are shown in red bars, and increases in green. Adjusted earnings of \$18.5 billion are increased by non-cash items, including depreciation, depletion and amortisation and write-offs of \$22.5 billion, interest of \$2.7 billion, and tax charges and non-controlling interest of \$12.4 billion, resulting in adjusted EBITDA of \$56.1 billion. Cash inflows also include JV movements of \$2.6 billion, and from derivatives movements of \$0.7 billion, while tax paid and other items reduce cash by \$14.8 billion. Working capital movements result in a net outflow of \$1.8 billion, made up of smaller flows from inventories (inflow of \$2.5 billion from price and outflow of \$0.6 billion from volume) and receivables, payables and other (outflow of \$3.7 billion). The chart ends with CFFO of \$42.9 billion for 2025.

Structural cost reduction of \$5 - 7 billion¹ by end-2028

This chart displays underlying operating expenses in billions of US dollars and the structural cost reductions since 2022. In 2022, total underlying operating expenses were \$39.5 billion shown as a dark grey bar. Structural cost reductions are shown as green bars, light green for portfolio and dark green for non-portfolio costs for respective years. For 2023–2024, structural costs fell by \$3.1 billion, of which \$1.9 billion attributed to non-portfolio items. In 2025, structural costs fell by \$2.0 billion, of which \$1.2 billion were in non-portfolio costs. A separate category labelled "Growth, Macro/Inflation & other" is shown without a specific value in light grey, pushing up underlying operating expenses for 2025. The chart includes a 2025 underlying operating expenses of \$35.0 billion.

Performance focus

The chart displays controllable availability for Upstream and LNG midstream availability from 2021 to 2025. Upstream is shown in yellow and LNG in blue. Upstream availability starts near 88% in 2021, dips in 2022, and rises to about 89% by 2025. LNG availability begins at around 87%, declines in 2023, and gradually increases to approximately 90% by 2025.

New projects to deliver >1 million boe/d by 2030

The chart displays peak production from new projects which are expected to deliver more than 1 million barrels of oil equivalent per day (boe/d) by 2030. The bars colour-coded as follows: light blue for Conventional oil and gas (COG), medium blue for Deep Water (DW) and dark blue for Integrated Gas (IG). A horizontal bar chart lists projects Whale (DW), Mero-4 (DW), and others, with more than 250 kboe/d having come online so far. The projects that have not come online yet include Manatee (IG), Marjoram/Rosmari (COG), North Field East (IG), Crux (IG), Orca (DW), North Field South (IG), Bonga North (DW), Sparta (DW) and others. The total bar shows that more than 1 million boe/d is expected by 2030.

Balanced capital allocation

The image titled "Balanced Capital Allocation" outlines Shell's approach to capital allocation, emphasising a value-led strategy. It is divided into two main sections: "Total Distributions" and "Cash Capex." The "Total Distributions" section highlights that 40-50% of Cash Flow from Operations (CFFO) will be distributed through the cycle, prioritising buybacks, with a progressive dividend increase of 4% annually, with intrinsic value creation of >10% p.a. normalised FCF/share growth. The "Cash Capex" section indicates an investment range of \$20-22 billion per year between 2025-2028, including IGU Capex at ~\$12-14 billion per year and DSR Capex at ~\$8 billion per year. Additional elements include capital reallocation targeting ≥10% Return on Average Capital Employed (ROACE) across segments. The image emphasises maintaining a strong investment-grade rating through the cycle, focusing on balance sheet strength.

Goal Zero on safety

The chart shows Shell's fatality and permanent impairment frequency, measured per 100 million working hours, from 2020 to 2025, alongside total million working hours. The frequency declines steadily over the period, falling from around five in 2020 to a number between 0 and 5 by 2024 and 2025. Total working hours remain broadly stable across the period, shown as a shaded yellow area.

GHG emissions

The chart shows Shell's greenhouse gas emissions from 2016 and 2020 to 2025, measured in million tonnes of CO₂ equivalent, split between Scope 1 and Scope 2 emissions. The 2016 bar is shown as a grey bar, and bars for 2020 to 2025 are shown in yellow. The Scope 1 – Methane only line (RHS) is shown in red, as a dotted line for 2016 and as a solid line from 2020 to 2025. Scope 1 emissions for the year are represented in a darker shade, and Scope 2 are shown as a lighter shade. Total emissions decline over time, with a downward trend from 2020 onward, and stabilising in 2022. Methane intensity within Scope 1 emissions also decreases across the period.

Operational spills

The chart presents operational spills from 2020 to 2025, showing both the volume of spills in thousand tonnes as a red line on the left-hand side, and the number of spills in yellow on the right. Spill volumes remain relatively low through 2020 to 2023, increase in 2024, and then fall in 2025. The number of spills rises in 2022 all the way to 2024, before declining in 2025.

Process safety

The chart displays the number of process safety incidents from 2020 to 2025, split between Tier 1 and Tier 2 incidents. Tier 1 incidents are shown in red, and Tier 2 in yellow. Total incidents fluctuate year to year, with higher levels in 2020 and 2021, a reduction in 2022 and 2023, a rise in 2024, and a lower level again in 2025. Tier 2 incidents make up the majority of cases in each year, while Tier 1 incidents remain lower.

2025 SEC proved reserves position

The chart displays Proved reserves changes excluding synthetic crude reserves comparing 2024 and 2025 values, with adjustments shown in between. The chart is denominated in billion boe. Reductions to the 2024 figure are shown in red bars, and increases in green. The bars for 2024 and 2025 are grey, with values of 8.9 and 8.1 respectively. Production reduces the 2025 figure by 1.1 billion boe, and A&D (mainly Nigeria onshore) by 0.5 billion boe. Other net revisions increases the final number by 0.8 billion boe.
