

Shell plc

First quarter 2026 results

Integrated portfolio drives strong results

May 7, 2026

Definitions & cautionary note

The companies in which Shell plc directly and indirectly owns investments are separate legal entities. In this presentation “Shell”, “Shell Group” and “Group” are sometimes used for convenience to reference Shell plc and its subsidiaries in general. Likewise, the words “we”, “us” and “our” are also used to refer to Shell plc and its subsidiaries in general or to those who work for them. These terms are also used where no useful purpose is served by identifying the particular entity or entities. “Subsidiaries”, “Shell subsidiaries” and “Shell companies” as used in this presentation refer to entities over which Shell plc either directly or indirectly has control. The terms “joint venture”, “joint operations”, “joint arrangements”, and “associates” may also be used to refer to a commercial arrangement in which Shell has a direct or indirect ownership interest with one or more parties. The term “Shell interest” is used for convenience to indicate the direct and/or indirect ownership interest held by Shell in an entity or unincorporated joint arrangement, after exclusion of all third-party interest.

This presentation contains forward-looking statements (within the meaning of the U.S. Private Securities Litigation Reform Act of 1995) concerning the financial condition, results of operations and businesses of Shell. All statements other than statements of historical fact are, or may be deemed to be, forward-looking statements. Forward-looking statements are statements of future expectations that are based on management’s current expectations and assumptions and involve known and unknown risks and uncertainties that could cause actual results, performance or events to differ materially from those expressed or implied in these statements. Forward-looking statements include, among other things, statements concerning the potential exposure of Shell to market risks and statements expressing management’s expectations, beliefs, estimates, forecasts, projections and assumptions. These forward-looking statements are identified by their use of terms and phrases such as “aim”, “ambition”, “anticipate”, “aspire”, “aspiration”, “believe”, “commit”, “commitment”, “could”, “desire”, “estimate”, “expect”, “goals”, “intend”, “may”, “milestones”, “objectives”, “outlook”, “plan”, “probably”, “project”, “risks”, “schedule”, “seek”, “should”, “target”, “vision”, “will”, “would” and similar terms and phrases. There are a number of factors that could affect the future operations of Shell and could cause those results to differ materially from those expressed in the forward-looking statements included in this presentation, including (without limitation): (a) price fluctuations in crude oil and natural gas; (b) changes in demand for Shell’s products; (c) currency fluctuations; (d) drilling and production results; (e) reserves estimates; (f) loss of market share and industry competition; (g) environmental and physical risks, including climate change; (h) risks associated with the identification of suitable potential acquisition properties and targets, and successful negotiation and completion of such transactions; (i) the risk of doing business in developing countries and countries subject to international sanctions; (j) legislative, judicial, fiscal and regulatory developments including tariffs and regulatory measures addressing climate change; (k) economic and financial market conditions in various countries and regions; (l) political risks, including the risks of expropriation and renegotiation of the terms of contracts with governmental entities, delays or advancements in the approval of projects and delays in the reimbursement for shared costs; (m) risks associated with the impact of pandemics, regional conflicts, such as the Russia-Ukraine war and the conflict in the Middle East, and a significant cyber security, data privacy or IT incident; (n) the pace of the energy transition; and (o) changes in trading conditions. No assurance is provided that future dividend payments will match or exceed previous dividend payments. All forward-looking statements contained in this presentation are expressly qualified in their entirety by the cautionary statements contained or referred to in this section. Readers should not place undue reliance on forward-looking statements. Additional risk factors that may affect future results are contained in Shell plc’s Form 20-F for the year ended December 31, 2025 (available at www.shell.com/investors/news-and-filings/sec-filings.html and www.sec.gov). These risk factors also expressly qualify all forward-looking statements contained in this presentation and should be considered by the reader. Each forward-looking statement speaks only as of the date of this presentation, May 7, 2026. Neither Shell plc nor any of its subsidiaries undertake any obligation to publicly update or revise any forward-looking statement as a result of new information, future events or other information. In light of these risks, results could differ materially from those stated, implied or inferred from the forward-looking statements contained in this presentation.

Also, in this presentation we may refer to Shell’s “net carbon intensity” (NCI), which includes Shell’s carbon emissions from the production of our energy products, our suppliers’ carbon emissions in supplying energy for that production and our customers’ carbon emissions associated with their use of the energy products we sell. Shell’s NCI also includes the emissions associated with the production and use of energy products produced by others which Shell purchases for resale. Shell only controls its own emissions. The use of the terms Shell’s “net carbon intensity” or NCI is for convenience only and not intended to suggest these emissions are those of Shell plc or its subsidiaries.

Shell’s operating plan and outlook are forecasted for a three-year period and ten-year period, respectively, and are updated every year. They reflect the current economic environment and what we can reasonably expect to see over the next three and ten years. Accordingly, the outlook reflects our combined Scope 1 and 2 target, NCI target and our oil products ambition over the next ten years. However, Shell’s operating plan and outlook cannot reflect our 2050 net-zero emissions target, as this target is outside our planning period. Such future operating plans and outlooks could include changes to our portfolio, efficiency improvements and the use of carbon capture and storage and carbon credits. In the future, as society moves towards net-zero emissions, we expect Shell’s operating plans and outlooks to reflect this movement. However, if society is not net zero in 2050, as of today, there would be significant risk that Shell may not meet this target.

This presentation may contain certain forward-looking non-GAAP measures such as free cash flow and underlying operating expenses. We are unable to provide a reconciliation of these forward-looking non-GAAP measures to the most comparable GAAP financial measures because certain information needed to reconcile those non-GAAP measures to the most comparable GAAP financial measures is dependent on future events some of which are outside the control of Shell, such as oil and gas prices, interest rates and exchange rates. Moreover, estimating such GAAP measures with the required precision necessary to provide a meaningful reconciliation is extremely difficult and could not be accomplished without unreasonable effort. Non-GAAP measures in respect of future periods which cannot be reconciled to the most comparable GAAP financial measure are calculated in a manner which is consistent with the accounting policies applied in Shell plc’s consolidated financial statements.

The contents of websites referred to in this presentation do not form part of this presentation.

We may have used certain terms, such as resources, in this presentation that the United States Securities and Exchange Commission (SEC) strictly prohibits us from including in our filings with the SEC. Investors are urged to consider closely the disclosure in our Form 20-F, File No 1-32575, available on the SEC website www.sec.gov.

Middle East conflict: impact on Shell operations

Exposure centred around Qatar

~20% (~550 kboe/d) of Shell's oil and gas production comes from the Middle East, ~10% Qatar related. Oman assets continue to be operational. Upstream segment production not impacted.

Qatar update

■ Pearl GTL

- 100% Shell, with 140 kboe/d of GTL products split over two processing trains.
- Train Two damaged; repairs expected to take around one year.
- Train One not impacted; will be ready to restart operations as soon as geopolitical developments and the ability to safely export products allow.

■ LNG

- QatarEnergy shut in production on March 2, 2026 across all LNG facilities and subsequently declared force majeure.
- QatarEnergy LNG N(4) not directly impacted; Shell interest 30% (2.4 mtpa equity production).
- Shell has LNG supply contracts from existing QatarEnergy facilities.
- Construction on new facilities in which Shell has an equity interest was temporarily paused but has now resumed.

■ Integrated Gas Q2 outlook

- Oil & gas Production (kboe/d): 580 – 640 (Q1'26: 909)
- Liquefaction (MT): 6.8 – 7.4 (Q1'26: 7.9)

STRATEGIC RATIONALE

Accelerates Shell's strategy

- Sustains material liquids production, extends reserve life, and strengthens Integrated Gas business
- Increases Integrated Gas & Upstream 2030 production CAGR to 4% versus 2025²

Provides new platform for growth

- Increases exposure to Canada's advantaged lower-cost, lower carbon emissions³ Montney basin
- Strengthens portfolio by securing long-duration shale gas and liquids resources

Delivers long-term value creation

- Combination expected to generate double digit returns and bolsters long-term cash flows
- Accretive to free cash flow per share from 2027 onwards, delivering value for decades

¹ Unless otherwise stated, all financials are presented in US dollars. ² Capital Markets Day 2025 aim of 1% CAGR production growth in Upstream and Integrated Gas combined from 2024 to 2030 increases to 3%. ³ Top quartile of Canadian operators. ⁴ 2026 - 2030 average; price-normalised, for price assumptions see presentation 'Shell to acquire ARC Resources'.

Delivering more value, with less emissions

Profitably transitioning towards Net Zero by 2050

>10% nFCF per share growth p.a. through 2030¹

Distributing **40–50%** of CFFO to shareholders through the cycle

\$5–7 billion structural cost reductions by end 2028²

Cash capex **\$20–22 billion** p.a. 2027–2028; **2026: \$24–26 billion**³

Halve Scope 1 and 2 emissions under operational control by 2030, on a net basis⁴

Achieve near-zero methane emissions intensity by 2030⁵

Reduce the net carbon intensity (NCI) of the products we sell by **15–20% by 2030**⁴

Ambition to reduce customer emissions from the use of our oil products by **15–20% by 2030**⁶

¹ 2024 to 2030, price-normalised (refer to CMD25 materials for price assumptions). ² Cumulative from 2022 levels. ³ Updated post proposed ARC Resources acquisition. ⁴ 2016 reference year. ⁵ On an intensity basis. ⁶ Compared with 2021.

Key price markers and inputs – Oil

The chart shows quarterly oil price movements from the first quarter of 2024 to the first quarter of 2026, measured in US dollars per barrel. Brent crude is shown as a red line and JCC-3 as a grey line. Both price series fall through 2024 and 2025 before recovering toward the end of the period. By Q4 2025, Brent is approximately \$64 per barrel and rises to around \$81 per barrel in Q1 2026, while JCC-3 is approximately \$72 per barrel in both Q4 2025 and Q1 2026. Summary boxes below the chart highlight these quarter-end values.

[Return to page 4](#)

Key price markers and inputs – Gas

The chart presents quarterly gas price trends from the first quarter of 2024 to the first quarter of 2026, measured in US dollars per MMBtu. Henry Hub prices are shown in blue and remain low through 2024 before increasing during 2025 and into early 2026. Prices are approximately \$3.7 per MMBtu in Q4 2025 and rise to around \$4.2 per MMBtu in Q1 2026. EU TTF prices are shown in green and increase through 2024 with Q4 2025 price at around \$10.3 per MMBtu. Prices peak in early 2025, then decline before rising again into Q1 2026 to approximately \$13.7 per MMBtu. Quarter-end values are shown in summary boxes below the chart.

[Return to page 4](#)

Shell Indicative Refining Margin (IRM) and Indicative Chemical Margin (ICM)

The chart shows Shell's indicative refining margin (IRM), measured in dollars per barrel, and indicative chemical margin (ICM), measured in dollars per tonne, from the first quarter of 2024 to the first quarter of 2026. IRM is shown in yellow and ICM in black. IRM declines through 2024, reaches a low in early 2025 with Q4 2025 approximately at \$14 per barrel, and increases to around \$17 per barrel by Q1 2026. ICM fluctuates over the period, dipping in early 2025 with Q4 2025 at approximately \$140 per tonne and ending at around \$139 per tonne in Q1 2026. Quarter-end values are shown below the chart.

[Return to page 4](#)

Adjusted Earnings Q3 2025 to Q4 2025

The waterfall chart shows adjusted earnings in billions of US dollars moving from Q4 2025 to Q1 2026. Red bars indicate decreases and green bars indicate increases. Adjusted earnings start at \$3.3 billion in Q4 2025. Integrated Gas increases earnings by \$0.2 billion, Upstream by \$0.8 billion, Marketing by \$0.8 billion, Chemicals and Products by \$2.0 billion, and Renewables and Energy Solutions by \$0.2 billion. Corporate and non-controlling interest reduces earnings by \$0.3 billion. Adjusted earnings end at \$6.9 billion in Q1 2026.

[Return to page 7](#)

Cash conversion Q4 2025

The waterfall chart illustrates the conversion of adjusted earnings to cash flow from operations for the first quarter of 2026, measured in billions of US dollars. Red bars represent reductions and green bars represent increases. Adjusted earnings of \$6.9 billion are increased by depreciation, depletion and amortisation and write-offs of \$5.7 billion, interest of \$1.1 billion, and tax, charge and non-controlling interest of \$4.0 billion, resulting in adjusted EBITDA of \$17.7 billion. From adjusted EBITDA, joint venture dividends add \$0.4 billion, while derivatives reduce cash by \$0.4 billion and tax paid and other items reduce cash by \$0.5 billion. Working capital movements reduce cash by \$11.2 billion, driven primarily by inventory price movements of \$6.2 billion, inventory volume movements of \$0.5 billion, and movements in receivables, payables and other items of \$4.4 billion. Cash flow from operations for Q1 2026 is \$6.1 billion.

Balanced capital allocation

The image titled “Dynamic Capital Allocation” outlines Shell’s value-led financial framework for capital allocation. The slide is organised around two main areas: Total Distributions and Cash Capex, underpinned by balance sheet discipline. The Total Distributions section states that 40–50% of Cash Flow from Operations (CFFO) will be returned to shareholders through the cycle. This includes prioritising buybacks, with a New buyback programme of \$3 billion, and maintaining dividend growth, with a 5% dividend increase in the first quarter of 2026. The Cash Capex section highlights disciplined investment. Cash capital expenditure is shown at \$24–26 billion for 2026, reflecting an update following the proposed ARC Resources acquisition. Cash capex is expected to remain at \$20–22 billion per year for 2027–2028. Indicative 2026 allocations include Integrated Gas and Upstream capital expenditure of approximately \$16–18 billion and Downstream, Renewables and Energy Solutions capital expenditure of around \$8 billion. The slide also emphasises maintaining a strong balance sheet, with an explicit focus on preserving a strong investment-grade credit rating through the cycle.
